

UMBILICAL

UMBILICAL
OMBILICAL

UMBILICAL COLUMN

Umbilical Column has as its main function the descent of service networks from the ceiling and / or floor to the laboratory benches, in order to provide services to the users, through other service systems (services core, for example), and may even serve to contain the services himself in the panels the services, (gases, waters, electricity and date). The flexible and evolving modular system allows adaptation to different dimensions, configurations and needs. It has the possibility of being central to central benches, wall to wall benches and finally can have the full height of the room height, with wall fixing, (without direct attachment to the bench).

The removable panels of enclosure to the technical zones are easy to remove, which facilitates maintenance if this is necessary or if an update of the services is required.

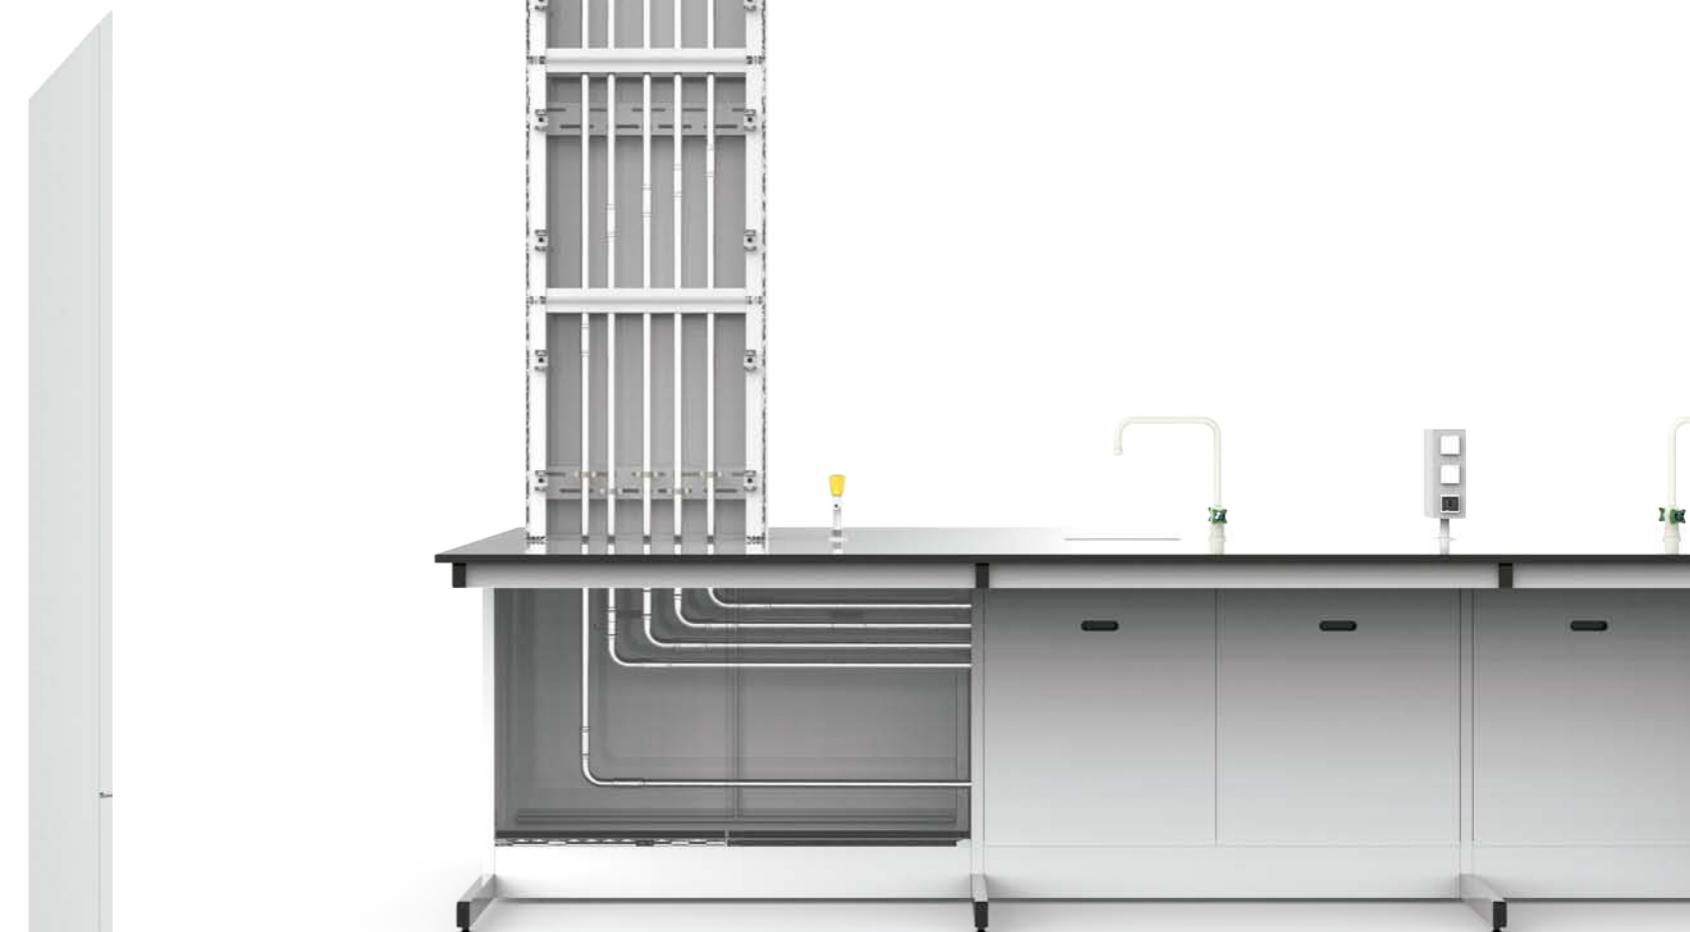

For a better finish the Umbilical Column is provided with a roof finish, so that aesthetically does not compromise the harmony of the room. The construction is fully metal standard, but upon request can be supplied in other materials.

COLUNA UMBILICAL

A Coluna Umbilical tem como maior função a descida de redes de serviços do teto e/ou piso até às bancadas de laboratório. Assim, fornece os serviços aos utilizadores, através de outros sistemas, (núcleo de serviços), podendo conter os serviços nos painéis, (gases, águas, eletricidade e dados). O sistema modular flexível e evolutivo permite a adaptação a diferentes dimensões, configurações e necessidades. Apresenta a possibilidade de ser central para bancadas centrais, mural para bancadas murais e por fim podem ter a altura total da sala, com fixação mural, (sem fixação directa à bancada).

Os painéis amovíveis de tapamento das zonas técnicas são de fácil remoção o que facilita a manutenção e, se for necessário, uma atualização dos serviços.

Para um melhor acabamento a Coluna Umbilical é fornecida com um remate para o tecto, para que esteticamente não comprometa a harmonia da sala. A construção standard é integralmente metálica, no entanto, segundo pedido pode ser fornecida em outros materiais.

COLONNE OMBILICAL

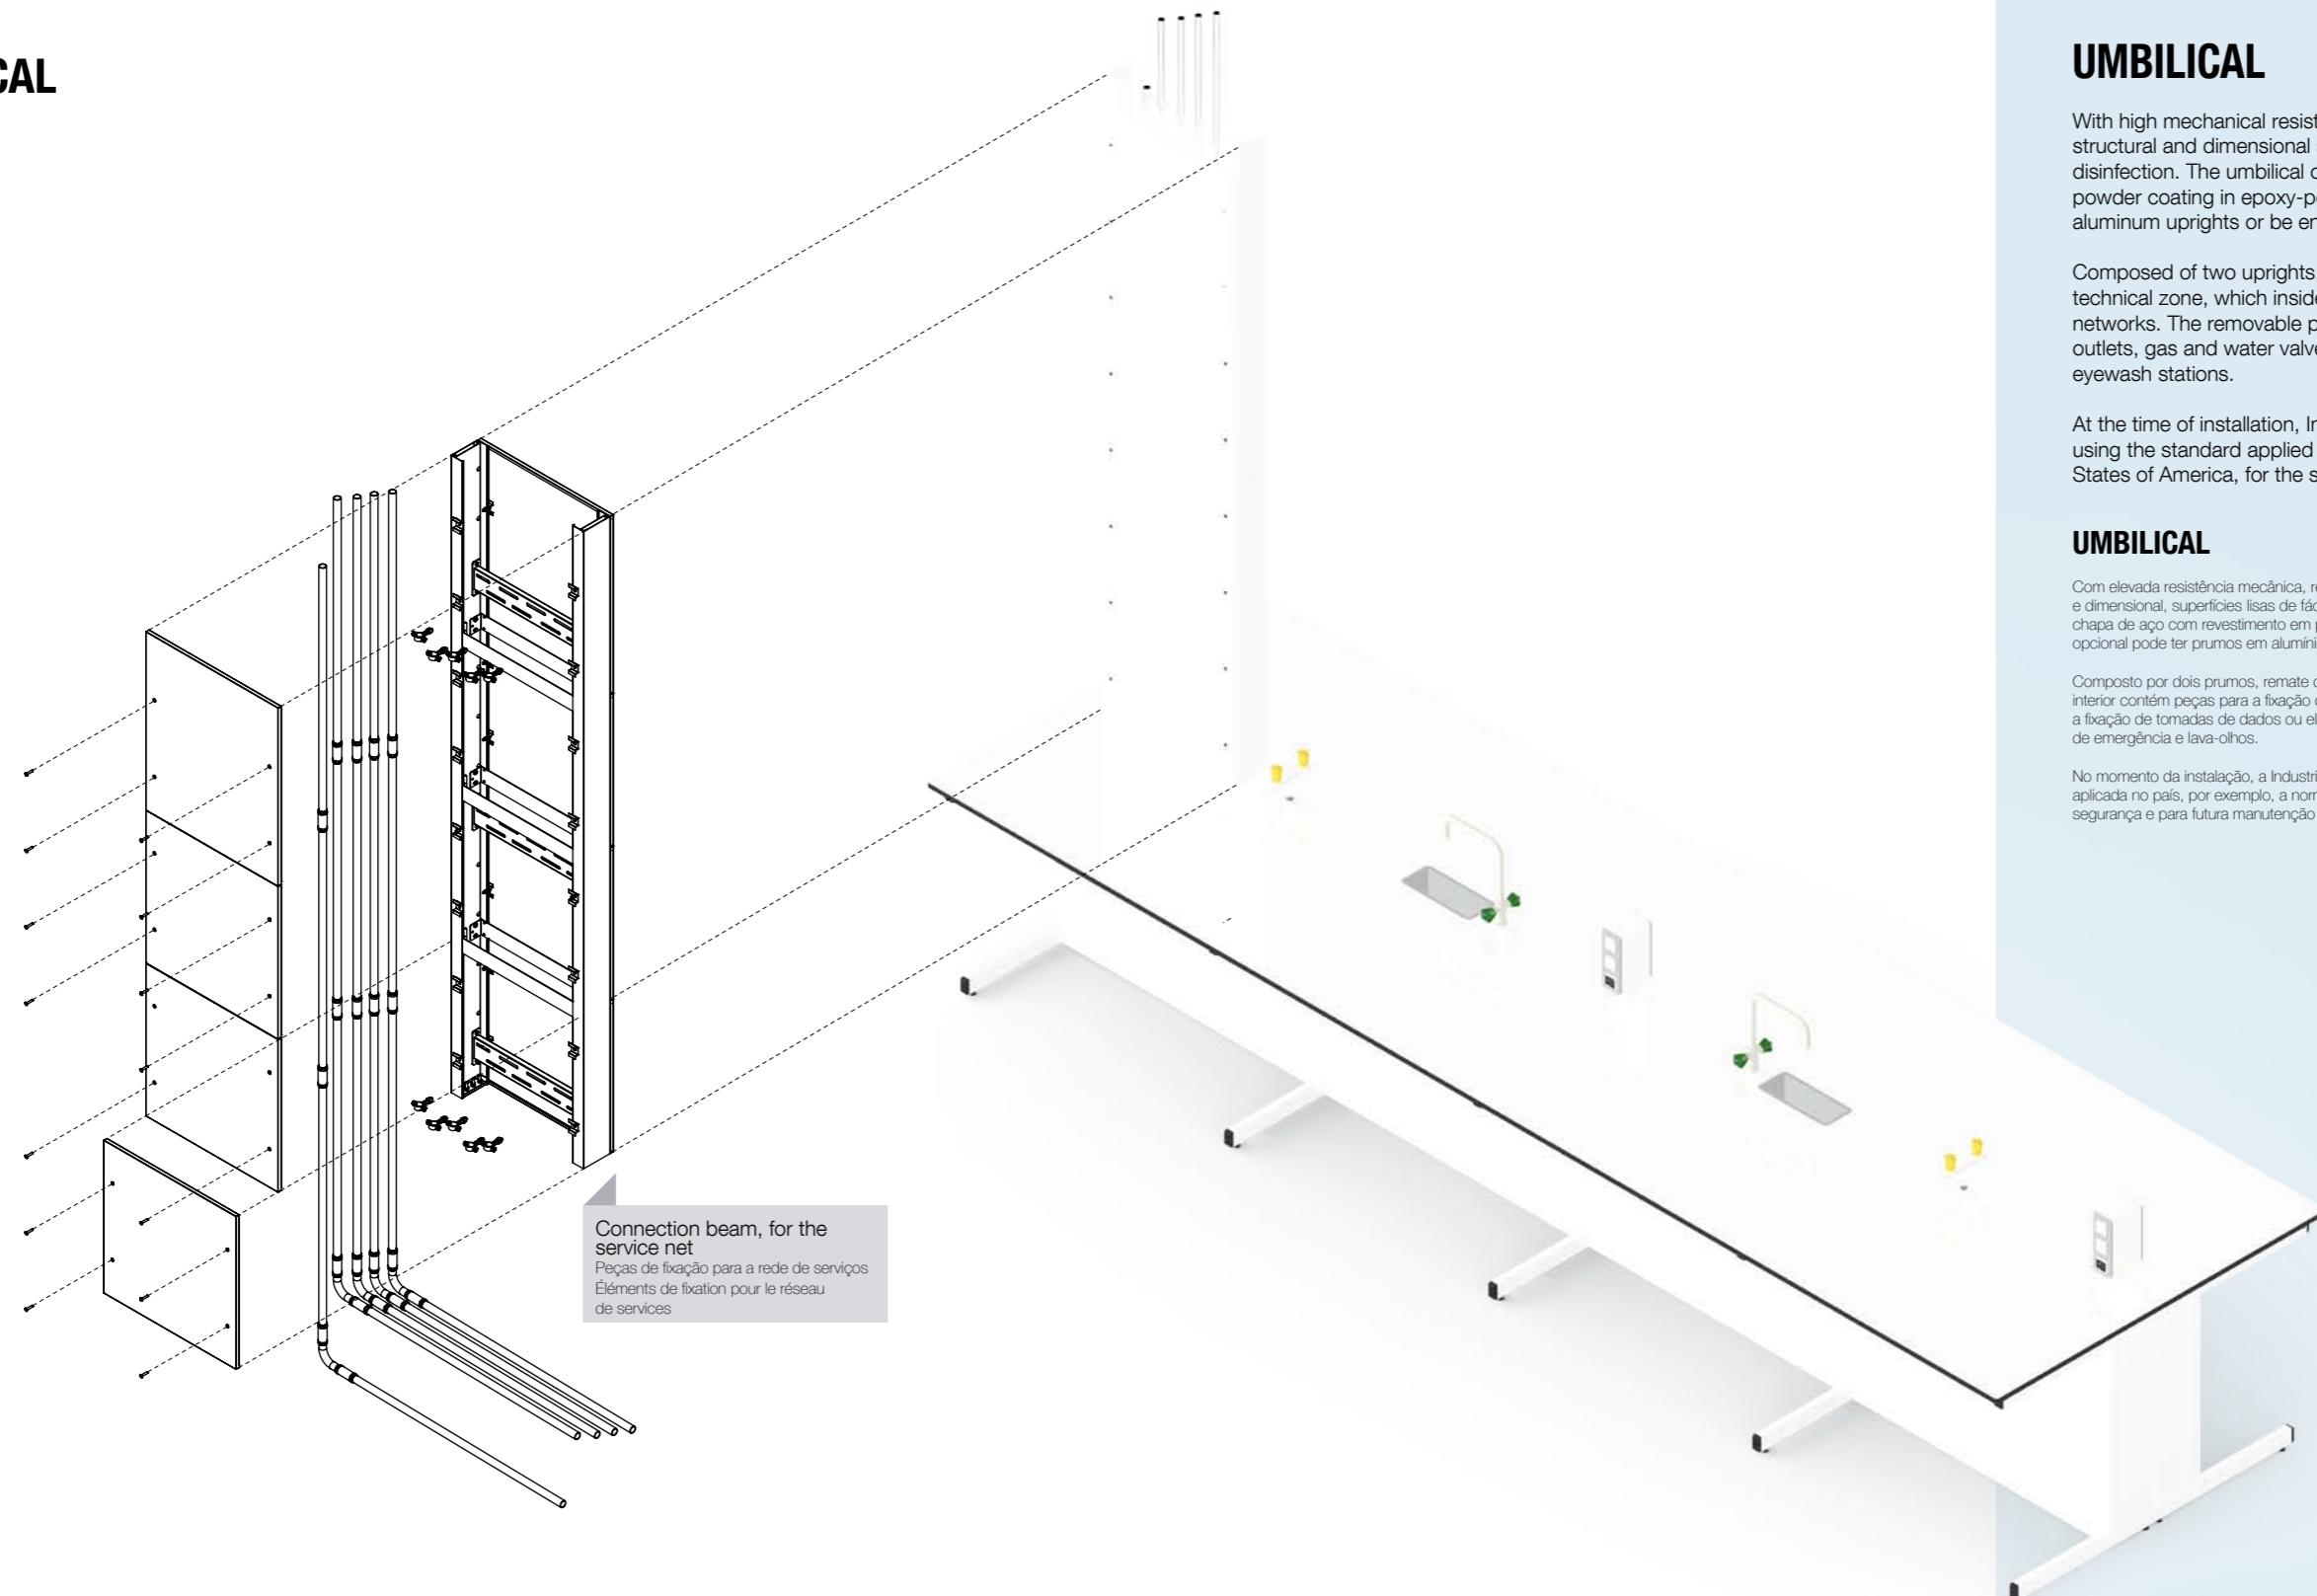

La colonne ombilicale a pour fonction principale de faire descendre les réseaux de services du plafond et / ou du sol aux tables de laboratoire, afin de fournir des services aux utilisateurs, par le biais d'autres systèmes de services (noyau de services), et peut même servir à contenir les services dans les panneaux (gaz, eaux, électricité et données). Le système modulaire et flexible permet une adaptation à différentes dimensions, configurations et besoins. Il a la possibilité d'être au centre des paillasse centraux, des murales aux paillasses murales et peut enfin avoir la hauteur totale de la pièce, avec fixation murale (sans fixation directe sur le paillage).

Les panneaux amovibles des zones techniques sont faciles à enlever, ce qui facilite la maintenance et, si nécessaire, une mise à jour des services.

Pour une meilleure finition, la colonne ombilicale est fournie avec une finition de plafond, de manière à ne pas compromettre estétiquement l'harmonie de la pièce. La construction est entièrement métallique en standard, mais sur demande peut être fourni dans d'autres matériaux.

UMBILICAL

UMBILICAL
OMBILICAL

UMBILICAL

With high mechanical resistance, corrosion resistance, impact and abrasion, high structural and dimensional stability, smooth surfaces of easy cleaning and disinfection. The umbilical column is integrally constructed of sheet steel with powder coating in epoxy-polyester resins, but as an optional it may have aluminum uprigts or be entirely made in stainless steel.

Composed of two uprigts, ceiling capping and removable panels to cover the technical zone, which inside has beams for fixing the piping of the service networks. The removable panels also allow the attachment of data or electrical outlets, gas and water valves, cupsinks, as well as emergency showers and eyewash stations.

At the time of installation, Industrial Laborum Ibérica will label and identify all piping using the standard applied in the country, ex. ANSI / ASME A13.1 for the United States of America, for the safety o the user and for future maintenance.

UMBILICAL

Com elevada resistência mecânica, resistência à corrosão, ao impacto e abrasão, elevada estabilidade estrutural e dimensional, superfícies lisas de fácil limpeza e desinfecção. A coluna umbilical é integralmente construída em chapa de aço com revestimento em pó termoendurecido em resinas epóxi-políster, não obstante, como opcional pode ter prumos em alumínio ou ser integralmente em aço inoxidável.

Composto por dois prumos, remate de tecto e painéis amovíveis para cobrimento da zona técnica, que no interior contém peças para a fixação das tubagens das redes de serviços. Os painéis amovíveis permitem ainda a fixação de tomadas de dados ou elétricas, válvulas de gases e águas, bem como pilhetas, e ainda, chuveiros de emergência e lava-olhos.

No momento da instalação, a Industrial Laborum Ibérica irá rotular e identificar todas as tubagens usando a norma aplicada no país, por exemplo, a norma ANSI / ASME A13.1 para os Estados Unidos da América, para a sua segurança e para futura manutenção e reparações.

OMBILICAL

Avec une résistance mécanique élevée, une résistance à la corrosion, un impact et à l'abrasion, une stabilité structurelle et dimensionnelle élevée, des surfaces lisses faciles à nettoyer et à désinfecter. La colonne ombilicale est intégralement construite en tôle d'acier avec revêtement en poudre thermodurcissable dans des résines époxy-polyester, mais elle peut également être dotée de montants en aluminium ou être entièrement en acier inoxydable.

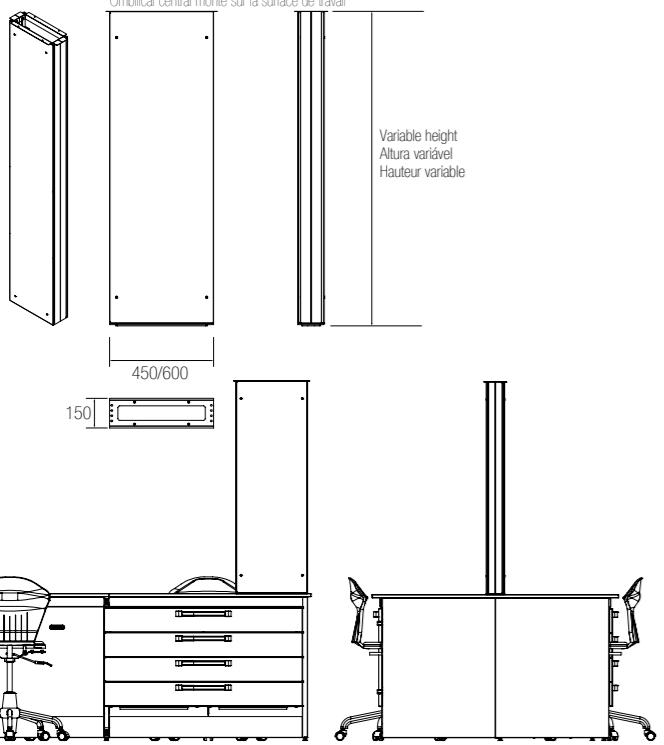

Composé de deux montants, panneau de plafond et de panneaux amovibles pour couvrir la zone technique, qui comporte à l'intérieur des pièces pour la fixation des tuyaux des réseaux de service. Les panneaux amovibles permettent également la connexion de prises de données ou électriques, de vannes à gaz et à eau, de piles, ainsi que de douches d'urgence et de douches oculaires.

Au moment de l'installation, Industrial Laborum Ibérica va étiqueter et identifier tous les tuyauteries utilisant la norme appliquée dans le pays, par exemple la norme ANSI / ASME A13.1 pour les États-Unis d'Amérique, pour leur sécurité ainsi que pour leur maintenance futures et réparations.

To Give life

Dar vida
Donner la vie

As it is implied in the name, the umbilical serves a primary purpose, feeding benches, uprights and all the laboratory with the services needed, through piping and cabling.

Como está implícito no nome, o umbilical serve um propósito primário, alimentação das bancadas, alçadios e todo o laboratório com os serviços necessários, através de tubagem e cablagem.

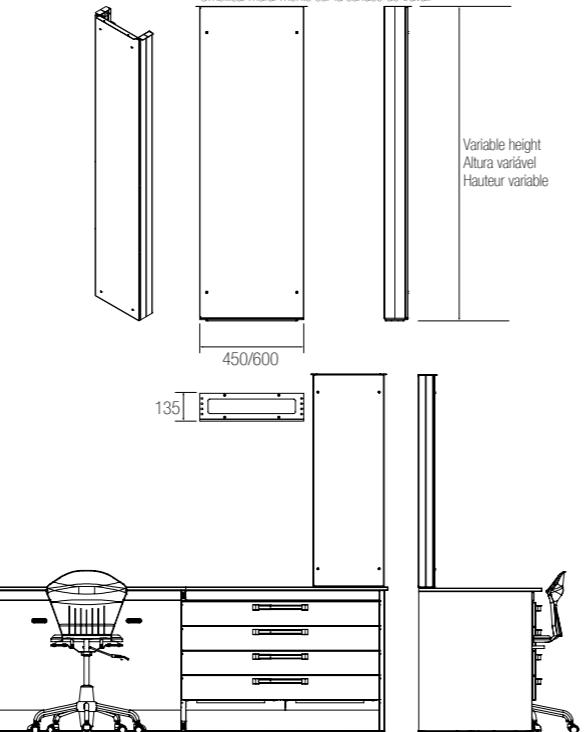

Comme il est implicite dans le nom, l'ombilical sert un objectif principal, en alimentant les paillasses, les montants et tout le laboratoire avec les services nécessaires, à travers la tuyauterie et le câblage.
