

## “F” FRAME

F-frame benches line with a closed leg in the tops is a highly configurable modular system, allowing the diversity and flexibility of solutions, according to the needs of use and with the available space of installation.

With high mechanical resistance, corrosion, impact and abrasion resistance, high structural and dimensional stability, the smooth surfaces that are easy to clean and disinfect and with a uniformly distributed load capacity of more than 200 kg / m<sup>2</sup>, its design according to the norm **EN 13150: 2001**, is a frame that will ensure that your needs will be fulfilled.

A demountable construction ensures the ease transport and installation flexibility, made of tubing and sheet steel with powder-coated thermosetting epoxy-polyester resins or in stainless steel. The levelers guarantee the compensation of the irregularities of the pavement with the regulation between -5mm and + 20mm.

## ESTRUTURA EM “F”

A linha de bancadas com estrutura em “F” é um sistema modular altamente configurável, permitindo uma diversidade e flexibilidade de soluções, de acordo com as necessidades de utilização e com o espaço de instalação disponível.

Com elevada resistência mecânica, resistência à corrosão, ao impacto e abrasão, elevada estabilidade estrutural e dimensional, superfícies lisas de fácil limpeza e desinfecção e com capacidade de carga (uniformemente distribuída) superior a 200 kg/m<sup>2</sup> é uma estrutura desenvolvida de acordo com a norma **EN 13150:2001** é uma estrutura em que as suas necessidades serão satisfeitas.

Uma construção desmontável garante a facilidade de transporte e flexibilidade de instalação, fabricada em tubo e em chapa de aço revestido a pó termoendurecido de resinas epóxi-políster ou em aço inoxidável. Os niveladores garantem a compensação das irregularidades do pavimento com a regulação entre -5mm e +20mm.

## STRUCTURE EN “F”

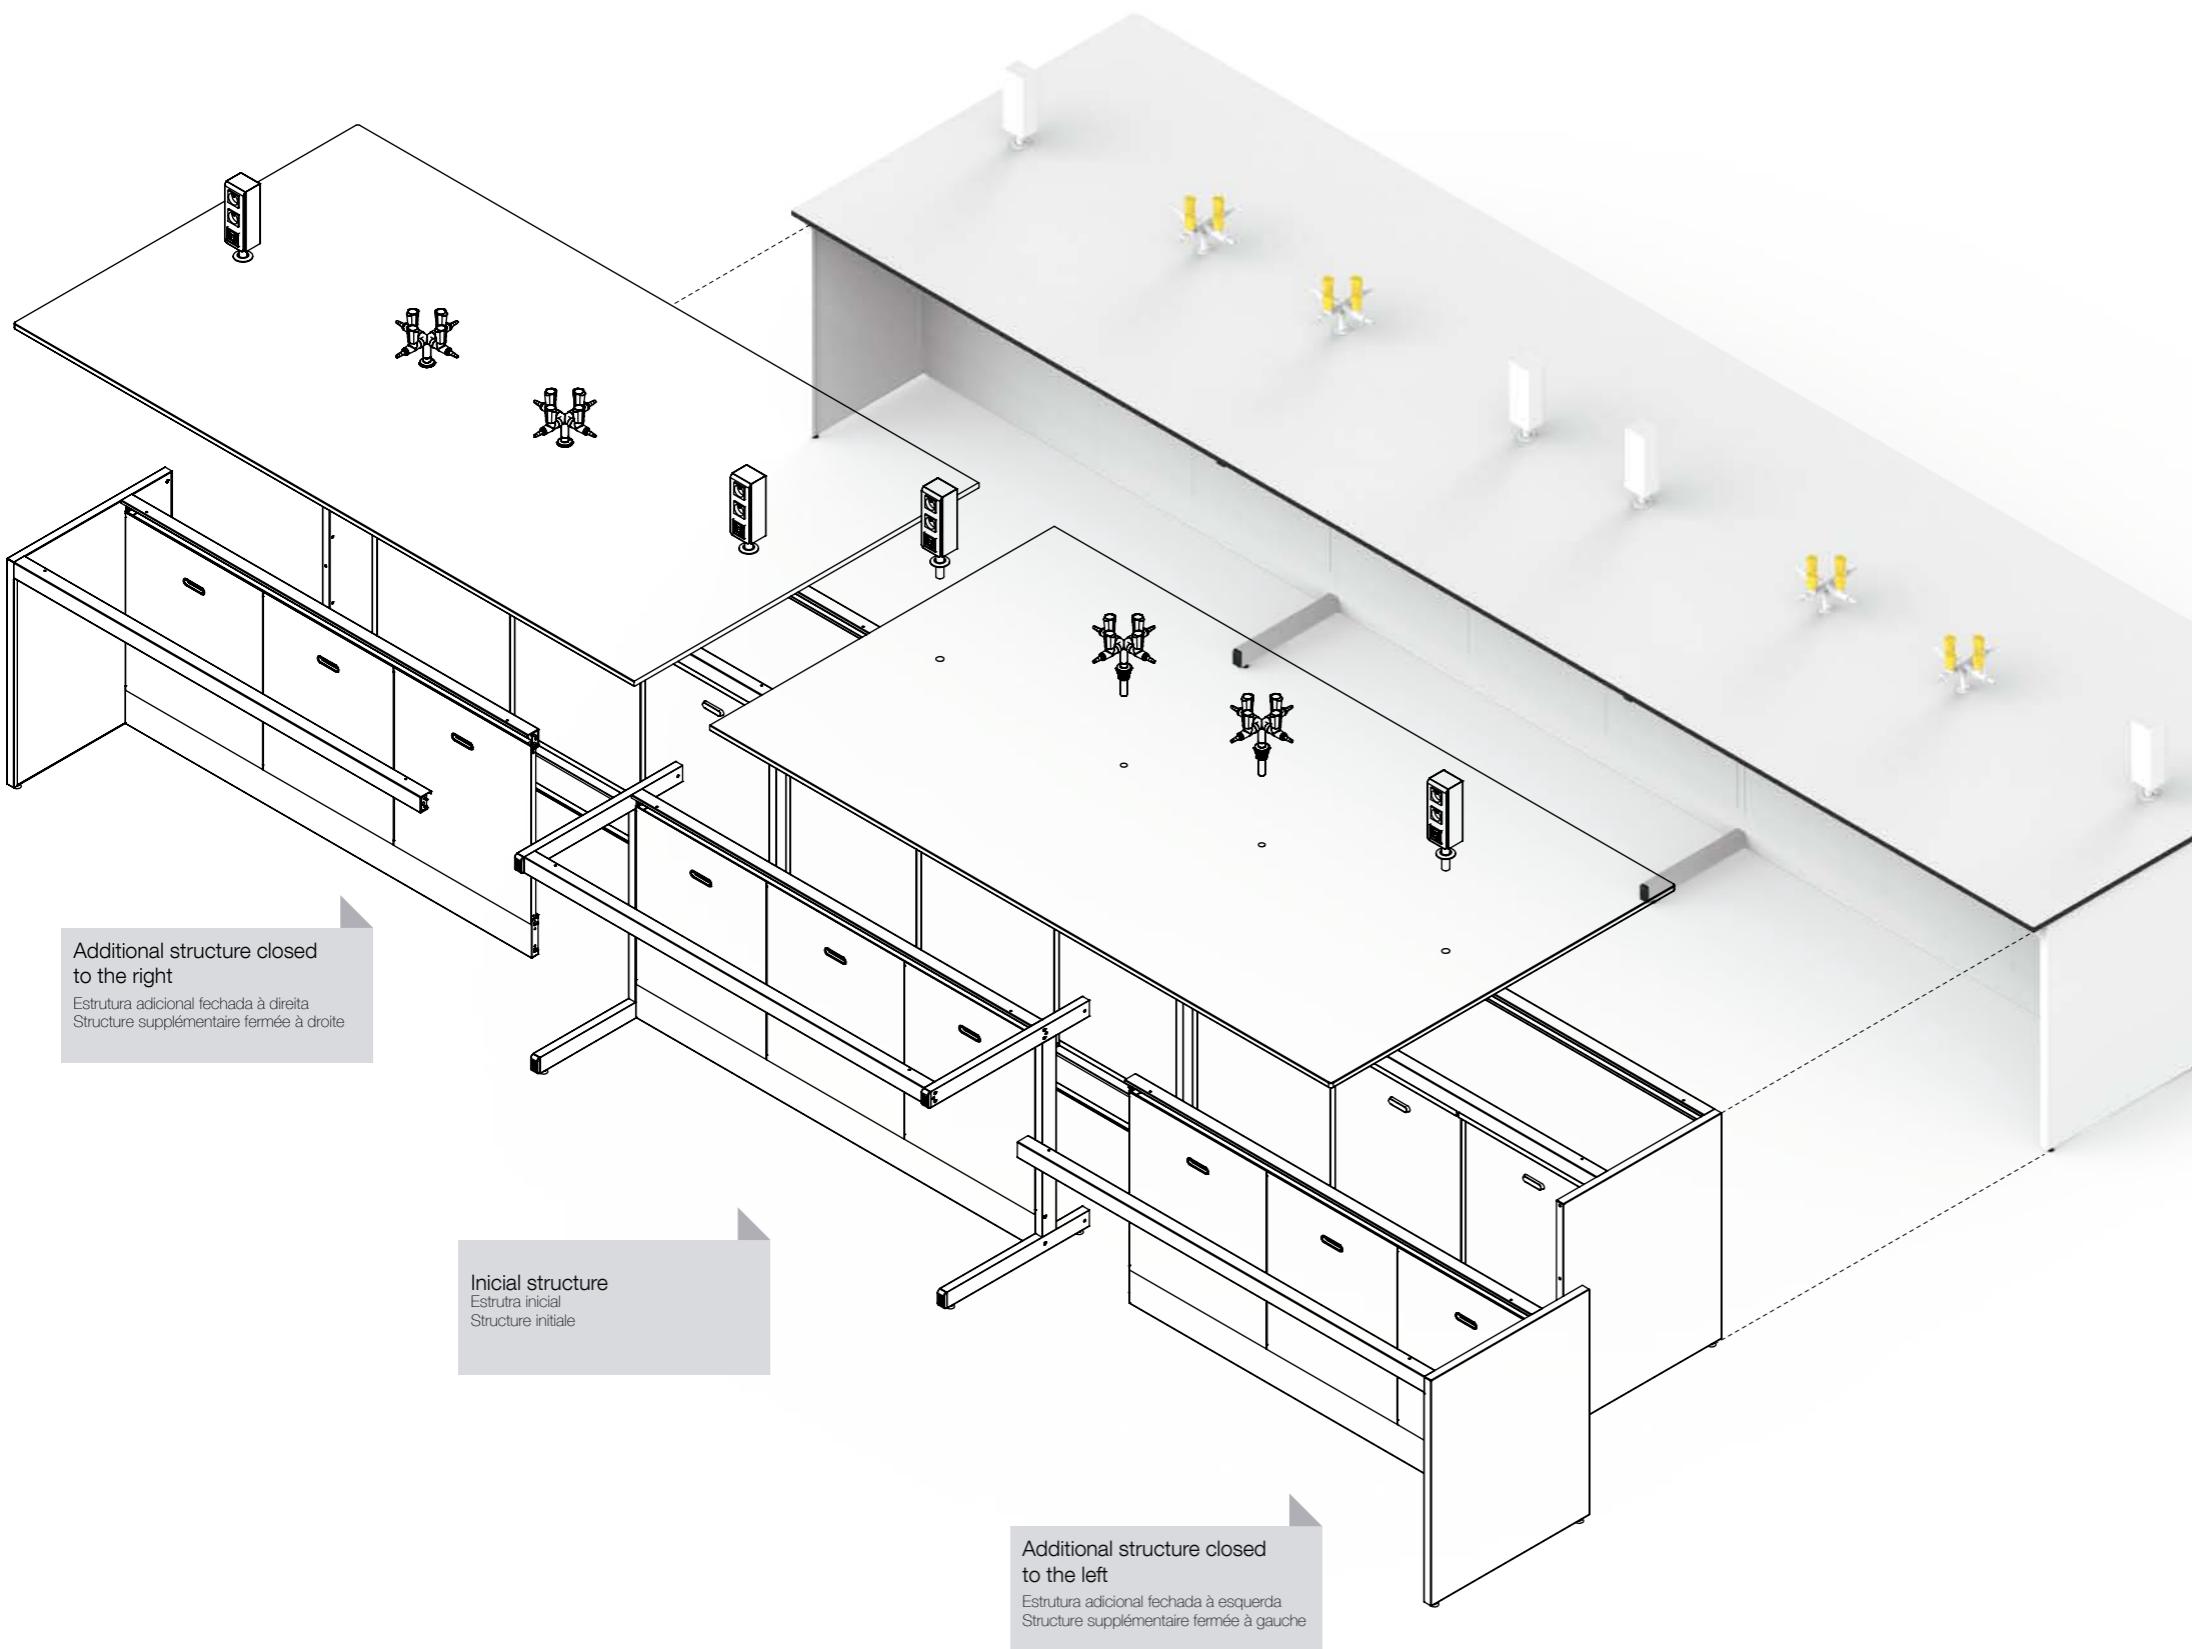

La ligne de paillasse avec structure en “F” est un système modulaire hautement configurable, permettant la diversité et la flexibilité des solutions, en fonction des besoins d'utilisation et de l'espace d'installation disponible.

Résistance mécanique élevée, résistance à la corrosion, aux chocs et à l'abrasion, stabilité structurelle et dimensionnelle élevée, surfaces lisses faciles à nettoyer et à désinfecter et avec une capacité de charge uniformément répartie supérieure à 200 kg / m<sup>2</sup>, est conçu selon la norme **EN 13150: 2001**, est une structure éprouvée pour répondre à vos besoins.

Une construction démontable assure la facilité de transport et la flexibilité d'installation et se compose de tubes et de tôles d'acier revêtue par poudre des résines époxy-polyesters thermorétractables ou d'acier inoxydable. Les nivelleurs garantissent la compensation des irrégularités de la chaussée avec une régulation entre -5mm et + 20mm.

# L5 "F" FRAME

ESTRUTURA EM "F"  
STRUCTURE EN "F"

## FRAME

The structural unit is demountable, modular and self-supporting, admitting an initial module and an additional module. This logic allows the union of different units to form central or mural benches, with two heights and varying lengths.

The additional structure has the added value of not doubling the legs, making the assembly not only more economical, but lighter, without interfering with the versatility and stability of the furniture layout. As an aesthetic and functional option, benches can be equipped with rear panels, cap-tubing panels and roofing panels.

The initial structures consist of two support legs, (closed and in "C"), are independent and self-supporting.

The additional structures have only one closed leg, serve to give continuity to the initial structure, providing the intended layout.

The height transition leg allows a variation of bench heights, (from 750mm to 900mm), without having to have duplicated legs.

## ESTRUTURA

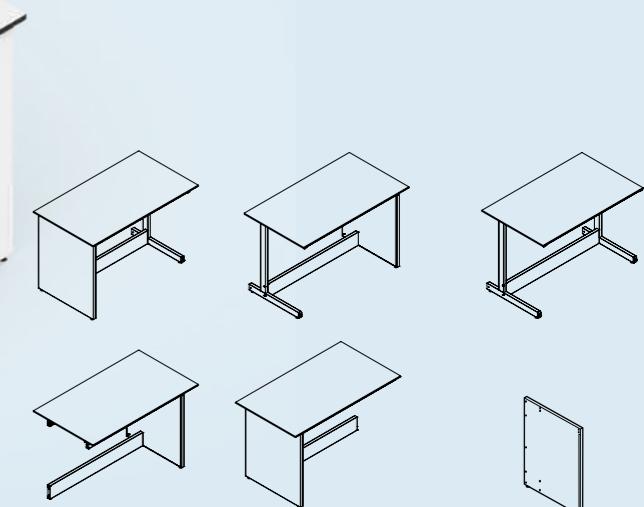

A unidade estrutural é desmontável, modular e autoportante, admitindo um módulo inicial e um outro adicional. Esta lógica permite a união de diferentes unidades para formar bancadas centrais ou murais, com duas alturas e variadíssimos comprimentos.

A estrutura adicional tem como mais-valia a não duplicação das pernas, tornando o conjunto não só mais económico, como mais leve, sem interferir com a versatilidade e estabilidade da disposição do mobiliário. Como opção estética e funcional, as bancadas podem ser equipadas com painéis posteriores, painéis tapa-tubagens e painéis de remate.

As estruturas iniciais são constituídas por duas pernas de suporte, (fechadas e em "C"), são independentes e autoportantes.

As estruturas adicionais possuem apenas uma perna fechada, servem para dar continuidade à estrutura inicial, proporcionando o layout pretendido.

A perna de transição de altura permite uma variação de alturas da bancada, (desde 750 mm até 900 mm), sem ter pernas duplicadas.

## STRUCTURE

L'unité structurelle est démontable, modulaire et autoportante, admettant un module initial et un module supplémentaire. Cette logique permet à l'unité de différentes unités de former des paillasses centraux ou muraux, à deux hauteurs et de longueurs variables.

La structure supplémentaire a la valeur ajoutée de ne pas doubler les pieds, ce qui rend l'assemblage non seulement plus économique, mais plus léger, sans nuire à la polyvalence et à la stabilité de la disposition des meubles. En option esthétique et fonctionnelle, les paillasses peuvent être équipées de panneaux arrières, de panneaux de bouchons et de panneaux de couverture.

Les structures initiales sont constituées de deux pieds de support (fermé et en "C"), indépendants et autoportants.

Les structures supplémentaires ont un seul pied fermé, servent à donner une continuité à la structure initiale, en fournissant la disposition voulue.

Le pied de transition de hauteur permet une variation de la hauteur du paillage (de 750 mm à 900 mm), sans avoir les doubles pieds.

STRUCTURE D'ANGLE ET PANNEAUX DE COUVERTURE

## CORNER FRAMES & COVER PANELS

In this chapter we present the corner frames, which are constituted by a support leg, making a "L" with the following structure, as well as the cover panels that can be integrated into all structures.

With high mechanical resistance, corrosion, impact and abrasion resistance, high structural and dimensional stability, the smooth surfaces that are easy to clean and disinfect and with a uniformly distributed load capacity of more than 200 kg / m<sup>2</sup> (according to EN 13150: 2001); is a certified structure that will enclose that your needs will be fulfilled.

A demountable construction ensures the ease transport and installation flexibility. Made of tubing and steel sheet with powder-coated thermosetting epoxy-polyester resins or in stainless steel. The levelers guarantee the compensation of the irregularities of the pavement with the regulation between -5mm and + 20mm.

The cover panels are designed to conceal and have access to the technical area where water piping, sewers, gases, electricity and data are housed. This zone is confined, in its extension, by the cover panels that are removable (facilitate fast access for maintenance operations).

With high mechanical resistance, corrosion, impact and abrasion resistance, high structural and dimensional stability, the smooth surfaces that are easy to clean and disinfect and with a uniformly distributed load capacity of more than 200 kg / m<sup>2</sup> (according to EN 13150: 2001); is a certified structure that will enclose that your needs will be fulfilled.

A demountable construction ensures the ease transport and installation flexibility. Made of tubing and steel sheet with powder-coated thermosetting epoxy-polyester resins or in stainless steel. The levelers guarantee the compensation of the irregularities of the pavement with the regulation between -5mm and + 20mm.

## ESTRUTURAS DE CANTO E TAPA TUBAGENS

Neste capítulo apresentamos as estruturas de canto, que são constituídas por uma perna de apoio, formando um "L" com a seguinte estrutura, bem como os painéis de cobertura que podem ser integrados em todas as estruturas.

Com alta resistência mecânica, resistência à corrosão, impacto e abrasão, alta estabilidade estrutural e dimensional, superfícies lisas fáceis de limpar e desinfetar e com capacidade de carga uniformemente distribuída de mais de 200 kg / m<sup>2</sup> (de acordo com EN 13150: 2001); é uma estrutura certificada que assegura que suas necessidades serão satisfeitas.

Uma construção desmontável garante a facilidade de transporte e flexibilidade de instalação. Fabricada em tubo e chapa de aço revestidos a pó termoendurecido de resinas epóxi-políster ou em aço inoxidável. Os niveladores garantem a compensação das irregularidades do pavimento com a regulação entre -5mm e + 20mm.

Os painéis de cobertura foram desenhados para ocultar e ter acesso à zona técnica, onde se alojam cablagens e tubagens de água, esgotos, gases, eletricidade e dados. Esta zona é confinada, na sua extensão, pelos painéis tapa-tubagens que são amovíveis (facilitam o acesso rápido para operações de manutenção).

## STRUCTURE D'ANGLE ET PANNEAUX DE COUVERTURE

Dans ce chapitre, nous présentons les structures d'angle, qui sont constituées par une jambe de force formant un "L" avec la structure suivante, ainsi que les panneaux de recouvrement pouvant être intégrés à toutes les structures.

Avec résistance mécanique élevée, résistance à la corrosion, aux chocs et à l'abrasion, stabilité structurelle et dimensionnelle élevée, surfaces lisses faciles à nettoyer et à désinfecter et avec une capacité de charge uniformément répartie supérieure à 200 kg / m<sup>2</sup> (conformément à la norme EN 13150: 2001); est une structure certifiée qui répondra à vos besoins.

Une construction démontable assure la facilité de transport et la flexibilité d'installation. Fabriqué en tube et en tôle d'acier revêtues en poudre de résines époxy-polyester thermodurcissables ou en acier inoxydable. Les nivelleurs garantissent la compensation des irrégularités du sol avec une régulation entre -5mm et + 20mm.

Les panneaux de couverture sont conçus pour dissimuler et avoir accès à la zone technique où sont logées les canalisations d'eau, les égouts, les gaz, l'électricité et les données. Cette zone est limitée, dans son extension, par les panneaux de couverture amovibles (facilitant un accès rapide pour les opérations de maintenance).
